

6. Short responsibility notes

Presentation Tier:

Handles the user-facing CougarTutor+ interface by collecting tutor request information such as course/subject, requested date/time, and session length. It provides immediate feedback for incomplete or invalid information and displays request statuses, confirmation details, rejection messages, and cancellation results.

Application Logic Tier:

Performs authoritative validation and enforces business rules for student eligibility, tutor availability, scheduling conflicts, session length, and approval requirements. It manages valid state transitions, assigns tutors, generates the unique sessionId, and processes actions such as approval, confirmation, cancellation, and completion.

Data Tier:

Stores the official tutoring transaction record, including the sessionId, student and tutor information, request details, current status, session notes, and audit timestamps such as createdAt, confirmedAt, and completedAt. It also preserves the transaction history so changes can be reliably tracked.
