

Step	System Behavior
1. Student submits an appointment request	The system receives the requested subject, tutor, date & time, and appointment information.
2. System validates request information	The system checks that required information is complete and verifies student eligibility.
3. System checks availability	The system verifies that the requested tutor and time are available and that no scheduling conflicts exist.
4. Conflict is detected	If the tutor is unavailable or a scheduling conflict exists, the system rejects the request and displays an error message.
5. Student updates request information	The student selects another available tutor or time and resubmits the request.
6. System rechecks availability	The system validates the updated request and checks availability again.
7. Request proceeds	If all requirements are satisfied, the request moves forward for approval/confirmation and the record is updated.
