CougarTutor+ Week 10 Test Cases

Live app (AWS Amplify): https://main.dz3mjcsko6gno.amplifyapp.com/

I. How To Test:

Open the app at https://main.dz3mjcsko6gno.amplifyapp.com/.No login is needed. Start each test from the standard valid inputs below, then change only the field(s) the test case names.

Field	Standard valid input
Student ID	1234567
Student Email	jdoe@cougarnet.uh.edu
Course / Subject	MIS 3371
Tutoring Topic / Reason	Help with Excel pivot tables
Preferred Date	Any date from tomorrow onward
Preferred Time	10:00 AM
Session Length	60 minutes
Tutoring Format	Online

The result appears in the **Request status** line under the Submit button. The **Checked by** column says where each rule is enforced:

- **Backend** (green): the form sends the request through API Gateway, and the AWS Lambda function accepts or rejects it. The Request status line shows the Lambda's message.
- **Both** (orange): the form blocks the input before sending, and the Lambda also rejects it if it is sent straight to the API. The browser message comes first, and the Lambda's message is shown in parentheses.
- **Browser** (yellow): only the form enforces it.

Browser messages are shown in Google Chrome's wording. Other browsers word them slightly differently.

Note: pick a date from tomorrow onward. The date picker sets its minimum from UTC time, so after 6:00 PM Central it may block today's date.

II. Valid Transactions

These inputs should be accepted by the form and by the Lambda backend.

#	Test case	Inputs	Expected result	Checked by
V1	Standard valid request	All standard valid inputs	Request status: Submitted - Tutoring request submitted successfully. (Not saved yet.)	Backend

V2	In-person, 30-minute session	Standard inputs, except Course: Accounting, Session Length: 30 minutes, Format: In person	Request status: Submitted - Tutoring request submitted successfully. (Not saved yet.)	Backend

III. Invalid transactions

Each input should be rejected with the message shown. Keep every other field at its standard valid value.

#	Test case	Inputs	Expected result	Checked by
I1	Student ID contains letters	Student ID: 1234ABC	Submission blocked: "Please match the requested format." (Lambda: "Student ID must be exactly 7 digits, numbers only.")	Both
I2	Student ID too short	Student ID: 123456	Submission blocked: "Please match the requested format." (Lambda: "Student ID must be exactly 7 digits, numbers only.")	Both
I3	Student ID missing	Student ID: (blank)	Submission blocked: "Please fill out this field." (Lambda: "Student ID must be exactly 7 digits, numbers only.")	Both
I4	Non-UH email	Student Email: jdoe@gmail.com	Request status: Validation Failed - Please use your UH student email (@cougarnet.uh.edu).	Backend
I5	Email missing @	Student Email: jdoe.cougarnet.uh.edu	Submission blocked: "Please include an '@' in the email address." (Lambda: "Please use your UH student email (@cougarnet.uh.edu).")	Both
I6	No course selected	Course / Subject: Choose a subject	Submission blocked: "Please select an item in the list." (Lambda: "Please choose a valid course or subject.")	Both
I7	No format selected	Tutoring Format: neither option chosen	Submission blocked: "Please select one of these options." (Lambda: "Please choose online or in-person.")	Both
I8	Past date	Preferred Date: any date before today	Submission blocked: "Value must be [today's date] or later." Past dates are greyed out. (Lambda: "Preferred date must be today or a future date.")	Both

I9	Time outside tutoring hours	Preferred Time: 5:00 PM	Under the field: "Please select a time between 9:00 AM and 5:00 PM in 15-minute increments." Then Request status: Validation Failed - Please select a time between 9:00 AM and 5:00 PM.	Backend

IV. Business-rule conditions

Tutoring runs 9:00 AM to 5:00 PM, and every session must end by 5:00 PM. That makes the latest start 4:30 PM for a 30-minute session and 4:00 PM for a 60-minute session. The Lambda function enforces these rules.

#	Rule	Inputs	Expected result	Checked by
B1	A session must end by 5:00 PM	Preferred Time: 4:15 PM, Session Length: 60 minutes	Under the field and in the status: Request status: Validation Failed - This session would end after 5:00 PM. 30-minute sessions must start by 4:30 PM and 60-minute sessions by 4:00 PM.	Backend
B2	The same start time is allowed for a shorter session	Preferred Time: 4:15 PM, Session Length: 30 minutes	Request status: Submitted - Tutoring request submitted successfully. (Not saved yet.)	Backend
B3	Times must be in 15-minute increments	Open Preferred Time and try 10:10 AM	Only :00, :15, :30 and :45 are offered. A typed 10:10 AM is blocked: "Please enter a valid value. The two nearest valid values are 10:00 AM and 10:15 AM." (Lambda: "Please select a time in 15-minute increments.")	Both
B4	A request becomes Submitted only after validation passes	Submit V1, then submit B1	V1 shows status Submitted. B1 shows status Validation Failed and is never marked Submitted.	Backend

V. Boundary conditions

Each limit is tested on both sides: the last value that should pass and the first that should fail.

#	Test case	Inputs	Expected result	Checked by
BD1	Opening time	Preferred Time: 9:00 AM	Request status: Submitted - Tutoring request submitted successfully. (Not saved yet.)	Backend
BD2	Just before opening	Preferred Time: 8:45 AM	Submission blocked: "Value must be 9:00 AM or later." Under the field: "Please select a time between 9:00 AM and 5:00 PM in 15-minute increments." (Lambda: "Please select a time between 9:00 AM and 5:00 PM.")	Both
BD3	Latest start, 60-minute session	Preferred Time: 4:00 PM, Session Length: 60 minutes	Request status: Submitted - Tutoring request submitted successfully. (Not saved yet.)	Backend
BD4	First start too late, 60-minute session	Preferred Time: 4:15 PM, Session Length: 60 minutes	Request status: Validation Failed - This session would end after 5:00 PM. 30-minute sessions must start by 4:30 PM and 60-minute sessions by 4:00 PM.	Backend
BD5	Latest start, 30-minute session	Preferred Time: 4:30 PM, Session Length: 30 minutes	Request status: Submitted - Tutoring request submitted successfully. (Not saved yet.)	Backend
BD6	First start too late, 30-minute session	Preferred Time: 4:45 PM, Session Length: 30 minutes	Request status: Validation Failed - This session would end after 5:00 PM. 30-minute sessions must start by 4:30 PM and 60-minute sessions by 4:00 PM.	Backend
BD7	Minimum topic length	Tutoring Topic: Help Excel (exactly 10 characters)	Request status: Submitted - Tutoring request submitted successfully. (Not saved yet.)	Backend

BD8	Below minimum topic length	Tutoring Topic: Help (4 characters)	Submission blocked: "Please lengthen this text to 10 characters or more (you are currently using 4 characters)." (Lambda: "Tutoring topic must be between 10 and 300 characters.")	Both
BD9	Maximum topic length	Tutoring Topic: exactly 300 characters	Counter shows 300 / 300. Request status: Submitted - Tutoring request submitted successfully. (Not saved yet.)	Backend
BD10	Over maximum topic length	Try to type or paste 301 characters	The field stops at 300 characters and the counter stays at 300 / 300. (Lambda rejects 301: "Tutoring topic must be between 10 and 300 characters.")	Both
BD11	Earliest allowed date	Preferred Date: tomorrow	Request status: Submitted - Tutoring request submitted successfully. (Not saved yet.)	Backend
